Spresso Decaf Crack +

- Backup to encrypted file-based disk drives - Supports any file name and archive format - Sub-directories support - Multiple backups per project - Restore to disk - Import/Export to/from external hard drive - Restore the project from a previous version (for the cases you loose the last version) - Every backup has a timestamp and a file modification timestamp. You can configure if you want to use the last or the current timestamp when making a backup. - A more technical feature: You can have multiple projects. A project is a kind of package which holds everything needed to restore a backup. It can be files, folders or sub-directories. The main project contains the packages of the actual project and sub-projects. You can add/remove projects as you need. - You can sync the data of the packages to a central server with the functionality of an external hard drive. This functionality can be activated on demand or every time you start the Spresso Decaf Cracked Accountsf. - A detailed log file is created at each backup. This file shows you which packages have been backuped and which file or folder have been modified. You can use this detailed log file to find out if a package was backuped or not. - The information of a package can be exported to a CSV file. - With a special plugin you can export the information of the project to an XML file. - There are options for sorting the packages (name, size, modification time, location, etc) - New! Export/Import of project structures to a CSV file. - Backup of opened projects (by project name, project description, or file name) - Backup project and sub-projects.
