I'm just trying to get familiar with the framework to eventually write some applications using it. I'm getting this error while trying to install the CodeIgniter 2.1.1. I've installed curl through pear. I've also checked that PHP has installed curl. Any ideas as to why I'm getting this error? Fatal error: Call to undefined function curl\_init() in /var/www/html/codeigniter/vendor/composer/composer/src/Composer/Downloader.php on line 564 A: Make sure you installed cURL. On Linux machines, usually it is installed by default. On Windows and Mac OS, you need to install it separately. Also, I would recommend using composer instead of

downloading CI manually. A: The install.php file in the htdocs folder of your CodeIgniter installation expects to be able to access curl. You need to update your php.ini file or add a php\_curl extension entry so that the install.php file can find the curl library that will be used by CodeIgniter. The present invention relates generally to video systems, and more particularly, to a digital wide-angle video system having an ultra-wide angle field of view. More and more consumers are taking video using digital cameras. The majority of digital cameras on the market today use a video mode to take pictures instead of taking a photo mode. The advantages of video mode in comparison to photo mode include: 1. Video camera captures and stores a video frame in memory (regardless of the amount of frames) 2. Video camera does not lose valuable information by storing frames to a memory (such as losing resolution or brightness of the image) 3. Video camera is able to add sound to a video or remove sound from a video in real time 4. If the memory is full, the camera can “
